

ABSTRACT OF THE DISCLOSURE

An apparatus used to align trucks, trailers and buses with the use of two laser units attached to the drive axle wheels and projecting said beam on each side of said vehicle onto the scale target installed on the apparatus that is attached to the steering axle wheels. When aligning a trailer, use the apparatus which attaches to the king pin that is held in place by two adjustable legs. This includes the use of the roller plates to set the wheels on. This also includes the use of a trammel rod with points to set the toe-in and alignment of the frame rails to the center of the axle.
